

We can repair and resole many other brands of shoes as well as our own. We also repair bags and jackets.

Ankle wrap boots.

These boots have soft leather around the ankle and are tightened up with thonging wrapped around the ankle and held with a toggle or by knotting the thonging.

Contrasting leather on the top part looks great.

\$175

"Steam-punk" style lace up boots.

Inspired by Steam-punk boots these lace up boots are opening by a zip on the inside so stop you going crazy lacing up such a tall boot. The straps are to help keep the boot firm on your foot but also for decoration and are optional. Works well with a chunky sole

\$235

Our shoes are all handmade in leather with a synthetic sole.

Colours and type of leather are subject to availability from our suppliers.

We use microcell sole material as experience has proved this to be the best comfort/wear combination. It is available in 6 and 10 millimeter thickness heels are a standard Topy rug which is very hardwearing.

To make a pair of shoes for you we need a tracing around the outside of the bare foot and a measurement across the ball of the foot from floor to floor as shown on the drawing.

Get someone else to do the tracing

Please don't use felt tip pens to do the drawing

We also need to know if you have any peculiarities of the foot such as bunions or different sized feet. If you wear orthotics, place them on the floor and stand on them to do the tracing. To measure the height of the orthotics draw a horizontal line on the heel at the back and measure from the ground to the line. Stand on the orthotic and measure again. The difference is the height of the orthotic.

If you have any queries please give us a ring

Keep the pen straight to avoid going under the foot
